---

Graphene FLAGSHIP Kick-Off meeting  
March 21, 2018  
Madrid, Spain

## Motivation and aim of the project

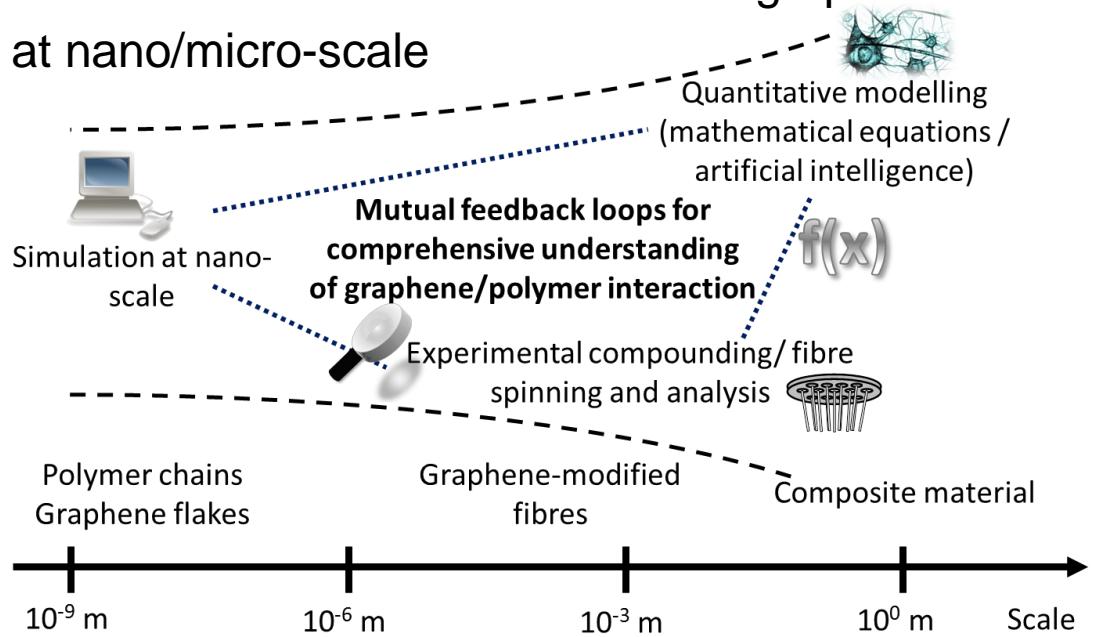

- Interaction of graphene in polymer materials hasn't been studied sufficiently so far
- Development of high-performance graphene composites is one of the Flagship's goals
- Fibers are widely used materials and parts of materials on every scale (filaments, textiles, semi-finished products)
- Precise understanding of interactions could accelerate graphene transfer to industry

# GraSage project presentation

## Aim of the project

- Fabrication of graphene-modified compounds and fibres (DOE)
- Data mining of DOE results and mathematical modeling of material-process-property relationships
- Molecular dynamics- and finite element simulation of graphene interaction in polymer matrices at nano/micro-scale

# GraSage project presentation

---

## Project consortium

- Four partners from Belgium, Spain the Netherlands and Germany
  - Belgium: KU Leuven, Composite Materials Group
  - Spain: AITEX textile research institute
  - Netherlands: Maastricht University, Aachen-Maastricht-Institute for Biobased Materials (AMIBM)
  - Germany: RWTH Aachen, Institut für Textiltechnik
- Project duration: 36 months
- Project leader: Maastricht University (Prof. Gunnar Seide)
- Involved funding agencies: FWO (Belgium), MINECO (Spain), NWO (Netherlands), DFG (Germany)

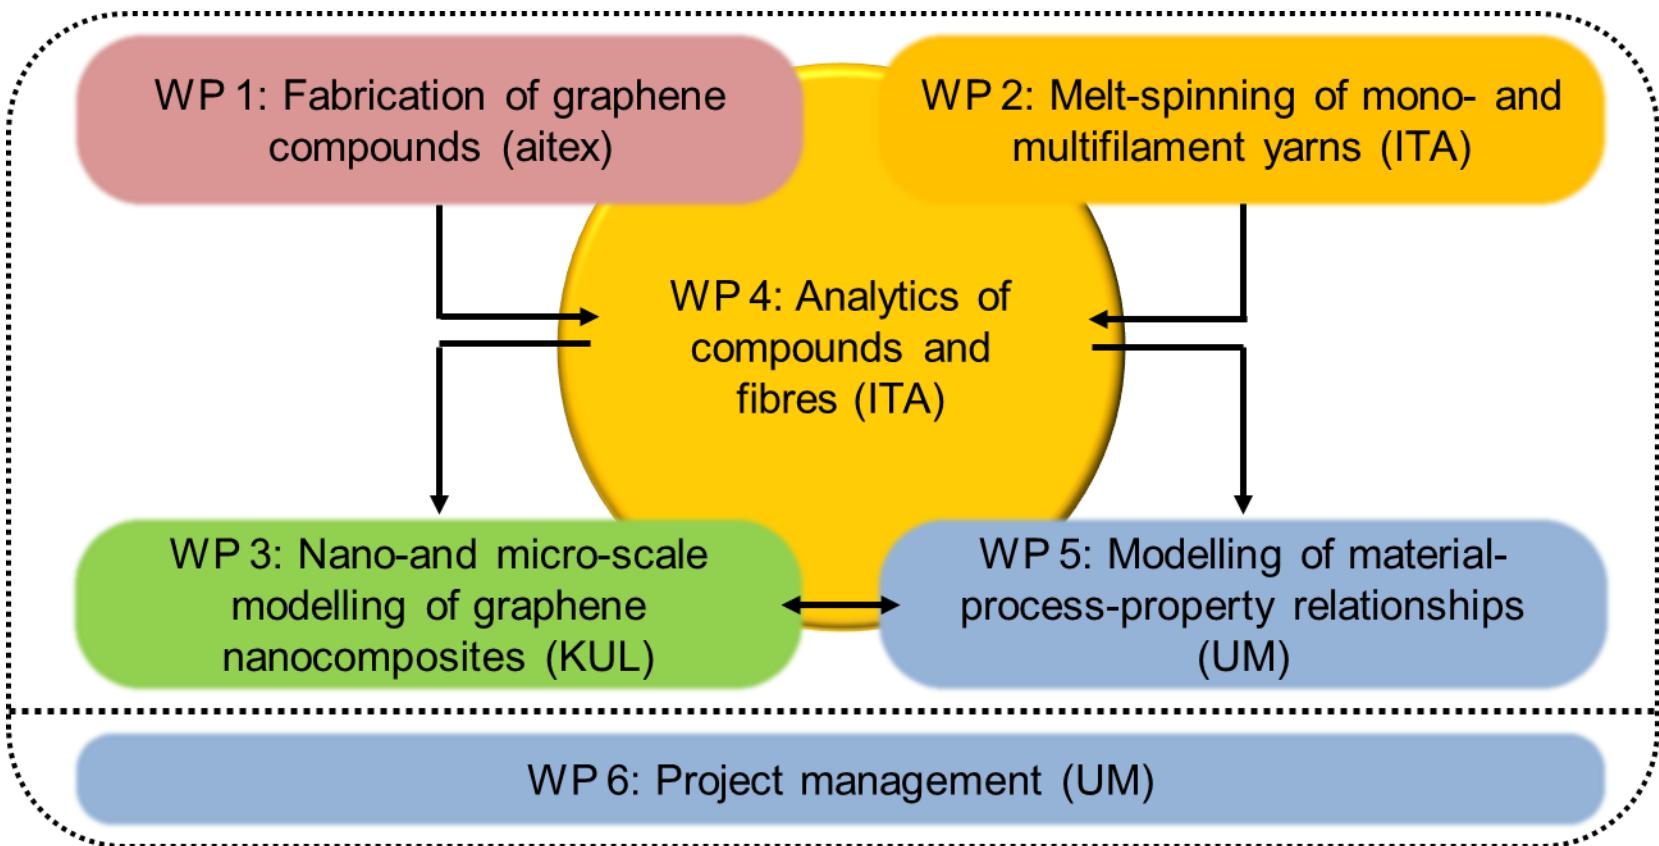

Netherlands Organisation for Scientific Research
